

## **ABSTRACT OF THE DISCLOSURE**

A switch device includes a male assembly, and a female assembly.

The male assembly includes a first fixing seat, a first operation socket, a first locking seat, and a retractable rod. The female assembly includes a second  
5 fixing seat, a second operation socket, and a second locking seat. Thus, the male assembly can be detached from the female assembly rapidly, thereby facilitating the user operating the switch device to open the door of the refrigerator. In addition, the user only needs to press the door of the refrigerator so as to open the door of the refrigerator easily and conveniently, thereby  
10 facilitating the user opening the door of the refrigerator.
